CHAPTER ONE:

GETTING COMFORTABLE WITH A COMPUTER

1.1 Turning a Computer On and Off Properly

Introduction

Before learning any computer skill, you must first know how to properly start and shut down a computer. Many beginners damage computers by switching them off incorrectly. Learning the correct procedure protects the system and your files.

A. Turning On a Desktop Computer

A desktop computer has separate parts: monitor, system unit (CPU box), keyboard, and mouse.

Follow these steps:

I. Ensure the computer is connected to a power source.
II. Switch on the wall socket or power extension.
III. Press the power button on the System Unit (CPU box).
IV. Press the power button on the Monitor.
V. Wait for the computer to load the Operating System (e.g., Windows).
VI. If required, enter your password and press **Enter**.

✅ The desktop screen will appear when the computer is ready for use.

B. Turning On a Laptop

A laptop is portable and has everything built into one device.

Steps:

I. Ensure the laptop battery is charged or connect it to power.
II. Press the power button.
III. Wait for the system to boot.
IV. Enter your password if required.

C. Shutting Down a Computer Properly (Very Important)

Never switch off the power directly from the socket unless the computer is completely off.

Correct Shutdown Procedure (Windows):

I. Click the **Start Button** (bottom-left corner).
II. Click **Power**.
III. Select **Shut Down**.
IV. Wait until the screen goes completely black.
V. Switch off the monitor (desktop users).
VI. Switch off the wall socket.

Why Proper Shutdown Is Important

- Prevents loss of data
- Protects system files
- Avoids hardware damage
- Extends the life of the computer

⚠ Common Mistakes to Avoid

- Switching off power before shutdown
- Forcing shutdown by holding the power button unnecessarily
- Removing battery while laptop is on

📝 Practice Activity 1

1. Turn on a computer correctly.
2. Log in to the system.
3. Shut it down properly without assistance.

Tick when complete:

☐ I can start a computer properly

☐ I can shut down a computer correctly

1.2 Using the Mouse and Keyboard Correctly

Introduction

The mouse and keyboard are the primary input devices used to communicate with a computer. Mastering them improves speed and confidence.

A. Using the Mouse

The mouse controls the pointer on the screen.

Main Mouse Actions

I. **Pointing** – Moving the mouse to position the pointer.
II. **Clicking** – Pressing the left button once.
III. **Double-Clicking** – Pressing the left button twice quickly.
IV. **Right-Clicking** – Pressing the right mouse button once.
V. **Dragging** – Holding the left button while moving the mouse.
VI. **Scrolling** – Using the scroll wheel to move up or down a page.

Practical Exercise 2

I. Move the pointer to the Recycle Bin icon.
II. Double-click to open it.
III. Close the window by clicking the X button.
IV. Right-click on the desktop.
V. Click anywhere else to remove the menu.

Repeat until comfortable.

B. Using the Keyboard

The keyboard is used for typing text and commands.

Main Sections of the Keyboard

I. Alphabet Keys (A–Z)
II. Number Keys (0–9)
III. Function Keys (F1–F12)
IV. Control Keys (Ctrl, Alt, Shift)
V. Special Keys (Enter, Backspace, Spacebar, Delete)

Important Keyboard Keys and Their Uses

- **Enter** – Moves to a new line or confirms a command
- **Backspace** – Deletes text to the left
- **Delete** – Deletes text to the right
- **Shift** – Used for capital letters
- **Caps Lock** – Types all letters in capital form
- **Spacebar** – Creates space between words

Basic Typing Practice

Follow these steps:
I. Open MS Word.
II. Type your full name.
III. Press Enter.
IV. Type your school or workplace.
V. Save the document as "Typing Practice".

Beginner Typing Tips

- Sit upright
- Place both hands on the keyboard
- Do not look at the keyboard continuously
- Type slowly, then increase speed

📝 Practice Activity 3

Type the following paragraph:
Digital skills are important in today's world. Learning how to use a computer improves education, communication, and employment opportunities.
Save the document correctly.
Tick when complete:

☐ I can use the mouse properly

☐ I can type and save a document

1.3 Understanding the Desktop Environment

Introduction

After turning on the computer and logging in, the first screen you see is called the **Desktop**. The desktop is your main working area. It contains tools that help you open programs, manage files, and control the computer.

Think of the desktop as a **digital office table** where you arrange your work.

A. Main Parts of the Desktop

I. Icons

Icons are small pictures that represent programs, files, or folders.

Examples:

- This PC
- Recycle Bin
- Microsoft Word
- Web Browser

☞ To open an icon, **double-click** it.

II. Taskbar

The taskbar is located at the bottom of the screen.

It contains:

- The **Start Button**
- Open programs
- Time and date
- Notification area

The taskbar helps you switch between open programs.

III. Start Button

The Start Button is found at the bottom-left corner of the screen.

It allows you to:

- Open programs
- Access settings
- Shut down the computer
- Search for files

IV. Desktop Background

This is the image or color behind the icons.

It can be changed according to user preference.

Practical Activity 4: Exploring the Desktop

Follow these steps:

I. Identify the Start Button.

II. Identify at least three icons on the desktop.

III. Click the time and date on the taskbar.
IV. Open and close one desktop icon.
Repeat until comfortable.

Creating a New Folder on the Desktop

Folders help you organize files.

Steps:

I. Right-click on an empty space on the desktop.
II. Select **New**.
III. Click **Folder**.
IV. Type your name as the folder name.
V. Press **Enter**.
You have now created a folder successfully.

Renaming a Folder

I. Right-click the folder.
II. Select **Rename**.
III. Type a new name.
IV. Press Enter.

Common Mistakes to Avoid

- Deleting important icons accidentally
- Saving all files directly on the desktop without organizing them
- Double-clicking too slowly (it may not open)

Skill Check

☐ I can identify parts of the desktop
☐ I can create a folder
☐ I can rename a folder

1.4 Opening and Closing Programs

Introduction

Programs (also called applications) are software used to perform specific tasks such as typing documents, browsing the internet, or creating spreadsheets.
Examples:

- Microsoft Word
- Microsoft Excel
- Microsoft PowerPoint
- Google Chrome

A. Opening a Program Using the Start Menu

Follow these steps:
I. Click the **Start Button**.
II. Scroll through the list of programs.
III. Click the program you want to open (e.g., Microsoft Word).
IV. Wait for the program window to appear.

B. Opening a Program Using Search

I. Click the **Start Button**.
II. Type the name of the program (e.g., Word).
III. Click the program from the search results.

C. Opening a Program from a Desktop Shortcut

I. Locate the program icon on the desktop.
II. Double-click the icon.
The program will open.

D. Understanding the Program Window

When a program opens, you will see:
I. Title Bar – Displays the name of the program
II. Minimize Button – Sends the window to the taskbar
III. Maximize Button – Expands the window
IV. Close Button (X) – Closes the program

E. Closing a Program Properly

Always save your work before closing.

Method 1: Using the Close Button

I. Click the **X** at the top-right corner.
II. If prompted, click **Save** before exiting.

Method 2: Using File Menu

I. Click **File**.
II. Select **Exit**.

Method 3: Using Keyboard Shortcut

I. Press **Alt + F4** on the keyboard.
(This closes the active window.)

Practical Activity 5

I. Open Microsoft Word.
II. Type your name.
III. Save the document.
IV. Close the program properly.
V. Re-open it using a different method.

Mini Project – Practice Session

1. Open Word.
2. Minimize it.
3. Open Excel.
4. Switch between the two programs using the taskbar.
5. Close both programs correctly.

Skill Check

☐ I can open a program in three different ways
☐ I can minimize and maximize windows
☐ I can close a program safely

CHAPTER TWO

FILE AND FOLDER MANAGEMENT

Introduction

When using a computer, you create many documents such as letters, reports, spreadsheets, pictures, and presentations. These documents are called **files**.
To avoid confusion and loss of work, files must be properly organized. Computers use **folders** to store and arrange files neatly.
Think of it like this:

- A **file** is like a single paper document.
- A **folder** is like a file cover or envelope that holds many papers.

Good file management helps you:

- Find your work quickly
- Avoid losing important documents
- Keep your computer organized
- Work more professionally

In this chapter, you will learn how to create, organize, move, rename, and delete files and folders.

2.1 Understanding Files and Folders

A. What is a File?

A **file** is a saved piece of work stored on a computer.
Examples of files:

- A Word document
- An Excel spreadsheet
- A PowerPoint presentation
- A picture
- A PDF document

Every file has:
I. A **File Name**
II. A **File Type (Extension)**
III. A **Storage Location**

Example of a File Name

`My_CV.docx`

- My_CV → File name
- .docx → File extension (shows it is a Word document)

Common File Extensions

- .docx → Microsoft Word
- .xlsx → Microsoft Excel
- .pptx → Microsoft PowerPoint
- .pdf → PDF Document
- .jpg / .png → Image file

Understanding file extensions helps you know which program opens the file.

B. What is a Folder?

A **folder** is a container used to store files.
Folders help you group related documents together.
Example:

📁 School Work
- 📄 English Essay
- 📄 Mathematics Assignment
- 📄 Science Report

Folders can also contain other folders. These are called **subfolders**.

C. Opening File Explorer

File Explorer allows you to view and manage files and folders.

Method 1:

I. Click the **Start Button**.
II. Click **File Explorer**.

Method 2:

I. Press **Windows Key + E** on the keyboard.
File Explorer will open.

D. Understanding File Explorer Window

When File Explorer opens, you will see:
I. Navigation Pane (Left side – shows folders and drives)
II. Main Window (Displays files and folders)
III. Address Bar (Shows current location)
IV. Search Bar (Used to search for files)

Practical Activity 1

I. Open File Explorer.
II. Click on **Documents**.
III. Identify at least three files in that location.
IV. Close File Explorer.
Repeat until confident.

Why File Organization Is Important

- Saves time
- Prevents confusion
- Makes work professional
- Protects important information

Skill Check

☐ I understand what a file is

☐ I understand what a folder is

☐ I can open File Explorer

2.2 Creating Files and Folders

Introduction

Creating folders and files is an important skill in digital competency. Before saving any work, you must know **where** and **how** to create a proper storage location.

In this section, you will learn how to:

- Create a new folder
- Create a file
- Save files in the correct location

A. Creating a New Folder

Folders help you organize related documents.

Method 1: Creating a Folder on the Desktop

Follow these steps:

I. Go to the Desktop screen.

II. Right-click on an empty space.

III. Select **New**.

IV. Click **Folder**.

V. Type the folder name (e.g., Digital Skills).

VI. Press **Enter**.

The new folder will appear on the desktop.

Method 2: Creating a Folder Inside Documents

I. Open **File Explorer**.

II. Click **Documents**.

III. Right-click on an empty space.

IV. Select **New**.

V. Click **Folder**.

VI. Type a name (e.g., School Work).

VII. Press **Enter**.

B. Creating a File (Example Using MS Word)

To create a file, you must open a program first.

Steps:

I. Open **Microsoft Word**.
II. Click **Blank Document**.
III. Type a short paragraph.
IV. Click **File**.
V. Select **Save As**.
VI. Choose the location (e.g., Desktop or Documents).
VII. Type the file name (e.g., Practice Document).
VIII. Click **Save**.
You have now created a file.

C. Important File Naming Rules

When naming files:

- Use clear and meaningful names
- Avoid very long names
- Avoid special symbols such as / \ : * ?
- Use underscores (_) instead of spaces if necessary

Example of good file name:

✓ Term_One_Report

✗ Document12345

Practical Activity 2

I. Create a folder called **My Assignments**.
II. Inside it, create another folder called **Computer Studies**.
III. Open Word and type your full name.
IV. Save the file inside the Computer Studies folder.

Skill Check

☐ I can create a folder

☐ I can create a file

☐ I can save a file in the correct location

2.3 Renaming, Copying, Moving and Deleting Files

Introduction

After creating files and folders, you may need to:

- Rename them
- Move them to another location
- Copy them
- Delete them

These are basic but essential digital skills.

A. Renaming a File or Folder

Renaming helps correct mistakes or improve organization.

Steps:

I. Locate the file or folder.
II. Right-click on it.
III. Select **Rename**.
IV. Type the new name.
V. Press **Enter**.

B. Copying a File

Copying creates a duplicate of the file.

Method 1: Using Right-Click

I. Right-click the file.
II. Select **Copy**.
III. Open the destination folder.
IV. Right-click inside the folder.
V. Select **Paste**.
A duplicate file will appear.

Method 2: Using Keyboard Shortcuts

I. Click the file once.
II. Press **Ctrl + C** (Copy).
III. Open the destination folder.
IV. Press **Ctrl + V** (Paste).

C. Moving a File

Moving transfers the file to a new location without creating a copy.

Steps:

I. Right-click the file.
II. Select **Cut**.
III. Open the new location.
IV. Right-click inside the folder.
V. Select **Paste**.
OR
I. Click and hold the file.
II. Drag it to the new folder.
III. Release the mouse button.

D. Deleting a File

Deleting removes unwanted files.

Steps:

I. Click the file once.
II. Press **Delete** on the keyboard.
OR
I. Right-click the file.
II. Select **Delete**.
The file moves to the **Recycle Bin**.

E. Restoring a Deleted File

If you delete a file by mistake:
I. Open **Recycle Bin**.
II. Right-click the file.
III. Select **Restore**.
The file will return to its original location.

Practical Activity 3

I. Create a file called **Test File**.
II. Rename it to **Final Test File**.
III. Copy it to another folder.
IV. Delete the original file.
V. Restore it from Recycle Bin.

Common Mistakes to Avoid

- Deleting important files accidentally
- Forgetting where files are saved

- Copying instead of moving (creating confusion)

Skill Check

☐ I can rename a file
☐ I can copy a file
☐ I can move a file
☐ I can delete and restore a file

2.4 Using External Storage Devices (Flash Disk Practice)

Introduction

External storage devices are used to store, transfer, and back up files. The most common external storage device is a **USB Flash Disk**.
Other examples include:

- External Hard Drive
- Memory Card
- External SSD

In this section, you will learn how to:

- Insert a flash disk safely
- Open it
- Copy files to it
- Remove it properly

A. Inserting a Flash Disk

Follow these steps:
I. Locate a USB port on the computer.
II. Insert the flash disk carefully into the USB port.
III. Wait a few seconds for the computer to detect it.
IV. A notification may appear on the screen.

B. Opening the Flash Disk

Method 1: Using Notification

I. Click the notification that appears.
II. Select **Open Folder to View Files**.

Method 2: Using File Explorer

I. Open **File Explorer**.
II. Click **This PC**.

III. Locate the flash disk (usually named USB Drive).
IV. Double-click to open it.

C. Copying Files to a Flash Disk

I. Locate the file you want to copy.
II. Right-click the file.
III. Select **Copy**.
IV. Open the flash disk.
V. Right-click inside the flash disk window.
VI. Select **Paste**.
The file will be copied into the flash disk.

D. Copying Files From a Flash Disk to the Computer

I. Open the flash disk.
II. Right-click the file.
III. Select **Copy**.
IV. Open the desired folder on the computer.
V. Right-click and select **Paste**.

E. Safely Removing a Flash Disk (Very Important)

Never remove a flash disk without safely ejecting it.

Steps:

I. Locate the USB icon in the taskbar (bottom-right corner).
II. Click the USB icon.
III. Select **Eject USB Drive**.
IV. Wait for the message: "Safe to Remove Hardware."
V. Remove the flash disk carefully.

Why Safe Removal Is Important

- Prevents file corruption
- Protects stored data
- Avoids damage to the flash disk

Practical Activity 4

I. Insert a flash disk.
II. Create a new folder inside it called **Backup Files**.

III. Copy one document into the folder.
IV. Safely eject the flash disk.
Tick when complete:
☐ I can insert a flash disk
☐ I can copy files to a flash disk
☐ I can eject it safely

2.5 Searching and Organizing Files Efficiently

Introduction

As you continue using a computer, you may store many files. Finding a specific file quickly is an important digital skill.
In this section, you will learn how to:

- Search for files
- Sort files
- Organize files properly

A. Searching for a File

Method 1: Using File Explorer Search

I. Open **File Explorer**.
II. Navigate to the location (e.g., Documents).
III. Click inside the **Search Bar** (top-right corner).
IV. Type the file name or part of the name.
V. Press **Enter**.
The computer will display matching results.

Method 2: Using Start Menu Search

I. Click the **Start Button**.
II. Type the file name.
III. Select the file from the results.

B. Sorting Files

Sorting helps arrange files in order.

Steps:

I. Open a folder.
II. Right-click inside the folder.

III. Select **Sort by**.
IV. Choose one of the following:

- Name
- Date Modified
- Type
- Size

C. Organizing Files Properly

Follow these good practices:
I. Create folders for different categories (e.g., School, Work, Personal).
II. Use clear file names.
III. Avoid saving everything on the Desktop.
IV. Delete unnecessary files regularly.
V. Back up important documents in a flash disk or cloud storage.

Practical Activity 5

I. Create three folders named:

- School Work
- Personal
- Projects

II. Move related files into each folder.
III. Use the search bar to find one specific file.
IV. Sort the files by date.

Common Mistakes to Avoid

- Saving files without checking the location
- Using unclear file names
- Forgetting to back up important work
- Keeping too many files on the desktop

Final Skill Check for Chapter Two

☐ I can create and manage folders
☐ I can copy and move files
☐ I can use a flash disk properly
☐ I can search for files
☐ I can organize files professionally

PART II: WORD PROCESSING (MS WORD –PRACTICAL)

Excellent 👆
We now begin a very important practical section of your book.

CHAPTER THREE

INTRODUCTION TO MICROSOFT WORD

Introduction

Microsoft Word (MS Word) is a **word processing application** used to create, edit, format, and print documents.
It is commonly used for:

- Letters
- Reports
- Assignments
- CVs
- Memos
- Examination papers

Learning MS Word is one of the most important digital skills because it is widely used in schools, offices, businesses, and government institutions.
In this chapter, you will learn how to:

- Open Microsoft Word
- Understand the Word interface
- Identify important tools
- Navigate the workspace confidently

This chapter is fully practical.

3.1 Opening and Understanding the MS Word Interface

A. Opening Microsoft Word

There are several ways to open MS Word.

Method I: Using the Start Menu

Follow these steps:
I. Click the **Start Button**.
II. Scroll through the list of programs.
III. Locate **Microsoft Office** or **Microsoft Word**.
IV. Click **Microsoft Word**.
V. Wait for the application to open.

Method II: Using Search

I. Click the **Start Button**.
II. Type **Word** in the search bar.
III. Click **Microsoft Word** from the search results.

Method III: Using a Desktop Shortcut

I. Locate the Word icon on the desktop.
II. Double-click the icon.

When Word opens, you may see:

- A Start Screen
- Templates
- Blank Document option

Click **Blank Document** to begin typing.

B. Understanding the MS Word Interface

When you open a blank document, you will see the Word workspace.
Understanding the interface helps you work efficiently.

Main Parts of the MS Word Window

I. Title Bar

Located at the top of the screen.
It shows:

- The name of the document
- The name of the application (Word)

Example:
Document1 – Word

II. Quick Access Toolbar

Located at the top-left corner.
It contains frequently used commands such as:

- Save
- Undo
- Redo

III. The Ribbon

The Ribbon is the main tool area of MS Word.
It contains tabs such as:

- Home
- Insert

- Design
- Layout
- References
- Review
- View

Each tab contains groups of related tools.
Example:
The **Home Tab** contains:

- Font tools
- Paragraph tools
- Clipboard tools

IV. Document Area

This is the large white space where you type your work.
It is also called the **Workspace**.

V. Status Bar

Located at the bottom of the screen.
It shows:

- Page number
- Word count
- Language
- Zoom level

VI. Scroll Bars

Located on the right side (vertical) and bottom (horizontal).
Used to move through the document.

VII. Ruler

Located at the top and left side (if enabled).
Used for:

- Setting margins
- Aligning text
- Adjusting indents

Practical Activity 1: Exploring the Interface

Follow these steps:
I. Open Microsoft Word.
II. Click **Blank Document**.
III. Identify the Title Bar.
IV. Click the **Home Tab**.
V. Click the **Insert Tab**.

VI. Locate the Status Bar at the bottom.
VII. Close the document without saving.
Repeat until you can identify each part without assistance.

C. Understanding Tabs and Groups

Each tab contains groups of tools.
Example from the Home Tab:

- Clipboard Group (Copy, Paste, Cut)
- Font Group (Bold, Italic, Font Size)
- Paragraph Group (Alignment, Bullets)

When you click a tab, different tools appear.

Practical Activity 2

I. Open Word.
II. Click the **Home Tab**.
III. Locate the Bold button (B).
IV. Locate the Font Size box.
V. Click the **Insert Tab** and identify the Table option.

Why Understanding the Interface Is Important

- Increases speed
- Reduces confusion
- Improves confidence
- Makes formatting easier

Skill Check

☐ I can open MS Word using different methods
☐ I can identify the Title Bar
☐ I understand what the Ribbon is
☐ I can locate the Home and Insert tabs

3.2 Creating, Saving, and Opening Documents

Introduction

Creating and saving documents properly is one of the most important skills in Microsoft Word. If you do not save your work correctly, you may lose it.
In this section, you will learn how to:

- Create a new document
- Save a document for the first time
- Save changes to an existing document
- Open a saved document

This section must be practiced carefully.

A. Creating a New Document

When you open Word, you may already see a blank document. If not, follow these steps:

Steps to Create a New Document

I. Open **Microsoft Word**.
II. Click **Blank Document**.
III. A new typing page will appear.
IV. Place the cursor in the document area.
V. Begin typing your text.
You have now created a new document.

Practical Activity 1

I. Open MS Word.
II. Create a blank document.
III. Type the following:
My name is _____.
I am learning digital competency.
Microsoft Word is useful for creating documents.
Do not close the document yet.

B. Saving a Document for the First Time

Saving allows the computer to store your work permanently.

Steps to Save a New Document

I. Click **File** (top-left corner).
II. Click **Save As**.
III. Choose the location (e.g., Documents or Desktop).
IV. Click the selected location.

V. Type the file name (e.g., Word Practice).
VI. Click **Save**.
The file is now saved.

Important Note
If you do not save your work and the computer shuts down unexpectedly, your work may be lost. Always save regularly.

C. Saving Changes to an Existing Document

After making changes, you must save again.

Method I: Using the Save Button

I. Click the **Save icon** (disk symbol) in the Quick Access Toolbar.

Method II: Using Keyboard Shortcut

I. Press **Ctrl + S** on the keyboard.
This updates the document with recent changes.

Good Practice Tip

Press **Ctrl + S** every few minutes while working.

D. Opening an Existing Document

If you have already saved a document, you can open it again later.

Method I: Opening from Word

I. Open Microsoft Word.
II. Click **File**.
III. Click **Open**.
IV. Click **Browse**.
V. Navigate to the folder where the file was saved.
VI. Double-click the file name.
The document will open.

Method II: Opening from File Explorer

I. Open **File Explorer**.
II. Navigate to the folder containing the file.
III. Double-click the file.
Word will open automatically.

E. Understanding “Save As”

“Save As” is used when:

- Saving a file for the first time
- Saving a copy with a different name
- Saving in a different location

Example:
You have a file named Report.
Using Save As allows you to create another file named Final Report.

Practical Activity 2

I. Create a new document.
II. Type a short paragraph about your school or workplace.
III. Save the document as **My School Information**.
IV. Close the document.
V. Re-open it using File Explorer.
VI. Add one more sentence.
VII. Press **Ctrl + S** to save changes.

Common Mistakes to Avoid

- Closing a document without saving
- Saving in the wrong location
- Forgetting the file name
- Not updating changes

Skill Check

☐ I can create a new document
☐ I can save a document correctly
☐ I can use Ctrl + S
☐ I can open an existing document

3.3 Basic Text Formatting (Fonts, Size, Bold, Italics, Alignment)

Introduction

Typing a document is not enough. A professional document must be **well formatted**.
Formatting means changing the appearance of text to make it:

- Clear
- Attractive
- Easy to read
- Professional

In this section, you will learn how to:

- Change font type
- Change font size
- Use Bold, Italic, and Underline
- Change text color
- Align text properly

All formatting tools are found in the **Home Tab**.

A. Selecting Text Before Formatting

Before formatting, you must first **select the text**.

Steps to Select Text:

I. Place the mouse pointer at the beginning of the text.
II. Click and hold the left mouse button.
III. Drag over the text.
IV. Release the mouse button.
The selected text will appear highlighted.

B. Changing Font Type

Font type changes the style of writing.
Examples of fonts:

- Arial
- Times New Roman
- Calibri

Steps:

I. Select the text.
II. Go to the **Home Tab**.
III. Click the **Font drop-down menu**.
IV. Choose a font style.

C. Changing Font Size

Font size controls how big or small text appears.

Steps:

I. Select the text.
II. Click the **Font Size box** in the Home Tab.
III. Choose a size (e.g., 12, 14, 16).
Common practice:

- Body text: Size 12
- Headings: Size 14–18

D. Using Bold, Italic, and Underline

These are basic formatting tools.

- **Bold (B)** makes text darker and stronger.
- *Italic (I)* slants text.
- Underline (U) draws a line under text.

Steps:

I. Select the text.
II. Click **B**, **I**, or **U** in the Home Tab.

E. Changing Text Color

Text color adds emphasis.

Steps:

I. Select the text.
II. Click the **Font Color icon** (A with a colored line).
III. Choose a color.
Avoid using too many colors in formal documents.

F. Text Alignment

Alignment controls how text appears on the page.
There are four types:
I. Align Left
II. Center
III. Align Right
IV. Justify

Steps to Change Alignment:

I. Select the text.
II. Go to the **Home Tab**.
III. Click one of the alignment buttons in the Paragraph group.

When to Use Alignment

- Left Align → Normal paragraphs
- Center → Titles and headings
- Right Align → Dates and signatures
- Justify → Reports and formal documents

Practical Activity 1

I. Open MS Word.
II. Type the following:
DIGITAL SKILLS TRAINING
My name is _____.
I am learning how to format documents professionally.
III. Select the first line.
IV. Make it:

- Bold
- Font size 16
- Center aligned

V. Select the paragraph.
VI. Change:

- Font to Arial
- Font size to 12
- Justify alignment

VII. Save the document.

G. Using Format Painter (Optional Advanced Skill)

Format Painter copies formatting from one text to another.

Steps:

I. Select formatted text.
II. Click **Format Painter** in the Home Tab.
III. Select the new text.
The formatting will be copied.

Common Mistakes to Avoid

- Formatting without selecting text
- Using too many fonts in one document
- Using too many colors
- Using very large font sizes unnecessarily

Mini Practice Challenge

Create a short document with:
- A centered heading (bold, size 18)
- A left-aligned paragraph
- One sentence in italics
- One word underlined

Save as: **Formatting Practice**

Skill Check

☐ I can change font type
☐ I can change font size
☐ I can use Bold, Italic, and Underline
☐ I can align text correctly
☐ I can format a document professionally

3.4 Paragraph Formatting (Line Spacing, Indentation, Bullets & Numbering)

Introduction

After learning how to format text, the next step is formatting paragraphs. Paragraph formatting helps make documents:
- Clear
- Organized
- Easy to read
- Professional

In this section, you will learn:
- How to set line spacing
- How to use indentation
- How to create bulleted and numbered lists

All these tools are found in the **Paragraph group** under the **Home Tab**.

A. Line Spacing

Line spacing is the amount of space between lines in a paragraph. Proper spacing improves readability.

Steps:

I. Select the paragraph.
II. Go to the **Home Tab** → **Paragraph group**.
III. Click **Line and Paragraph Spacing**.
IV. Choose the spacing (e.g., 1.0, 1.5, 2.0).

Practical Tip:

- School reports → 1.5 or 2.0 spacing
- Business letters → 1.15 or 1.5 spacing

B. Paragraph Indentation

Indentation moves text inward from the margin. It is used to:

- Mark the start of a paragraph
- Highlight quotations
- Create a professional look

Types of Indentation:

I. Left Indent → Moves the entire paragraph from the left margin
II. Right Indent → Moves the paragraph from the right margin
III. First Line Indent → Moves only the first line
IV. Hanging Indent → First line starts at the margin; rest of paragraph is indented

Steps to Apply Indentation:

I. Select the paragraph.
II. Go to the **Home Tab** → **Paragraph group**.
III. Click the **Increase Indent** or **Decrease Indent** buttons.
IV. For advanced settings:

1. Click the small arrow in the bottom-right corner of the Paragraph group.
2. Under **Indentation**, adjust Left, Right, or Special settings.
3. Click **OK**.

C. Bullets and Numbering

Bullets and numbering organize information into lists.

Using Bullets:

I. Select the lines of text.
II. Go to the **Home Tab** → **Paragraph group**.
III. Click **Bullets**.
IV. Choose a bullet style.

Using Numbering:

I. Select the lines of text.
II. Go to the **Home Tab → Paragraph group**.
III. Click **Numbering**.
IV. Choose a numbering style.

Practical Tip:

- Bullets → Unordered lists
- Numbering → Steps or sequences

D. Aligning and Spacing Paragraphs

I. Use **Left, Center, Right, or Justify** for paragraph alignment (covered in 3.3).
II. Use **Spacing Before and After** to add space between paragraphs.
III. Steps:

1. Select paragraph
2. Click the small arrow in the Paragraph group
3. Adjust **Spacing Before** and **After**
4. Click **OK**

Practical Activity 1

I. Open a new Word document.
II. Type the following:
Steps to Prepare a Healthy Breakfast

1. Wash fruits and vegetables
2. Prepare cereal or porridge
3. Serve juice or water

III. Select the paragraph title and make it **Bold and Centered**.
IV. Apply **1.5 line spacing** to the list.
V. Apply **Numbering** to the steps.
VI. Indent the list by using the **Increase Indent** button.
VII. Save the document as **Paragraph Practice**.

Common Mistakes to Avoid

- Forgetting to select the paragraph before formatting
- Using inconsistent spacing or indentation
- Using bullets for steps that require numbering
- Leaving paragraphs too close together

Mini Practice Challenge

Create a document titled **My Daily Routine** with:

- A centered heading
- Left-aligned paragraphs
- Line spacing 1.5
- Indented paragraphs for each activity
- A bulleted list for tasks like “Morning Activities”
- A numbered list for tasks like “Evening Activities”

Save the document.

Skill Check

☑ I can set line spacing
☑ I can apply paragraph indentation
☑ I can create bulleted and numbered lists
☑ I can format paragraphs professionally

3.5 Inserting and Formatting Tables

Introduction

Tables are used to **organize information** neatly in rows and columns. They are useful for:

- Schedules
- Marksheets
- Financial data
- Lists
- Reports

In this section, you will learn how to:

- Insert a table
- Add or remove rows and columns
- Merge and split cells
- Apply table styles and formatting

All tools are found in the **Insert Tab** and **Table Tools**.

A. Inserting a Table

Steps:

I. Open a Word document.
II. Click the **Insert Tab**.
III. Click **Table**.
IV. Move the cursor over the grid to select the number of rows and columns.
V. Click to insert the table.
Example: 4 columns × 5 rows table for a weekly schedule.

B. Adding or Removing Rows and Columns

Adding Rows:

I. Place the cursor in the row above or below where you want a new row.
II. Right-click → **Insert** → Choose **Insert Rows Above** or **Insert Rows Below**.

Adding Columns:

I. Place the cursor in the column next to where you want a new column.
II. Right-click → **Insert** → Choose **Insert Columns to the Left** or **Right**.

Deleting Rows or Columns:

I. Select the row or column.
II. Right-click → **Delete Cells** → Choose **Delete Entire Row** or **Column**.

C. Merging and Splitting Cells

Merging Cells:

I. Select the cells to merge.
II. Right-click → **Merge Cells**.
Use: To create a heading that spans multiple columns.

Splitting Cells:

I. Select the cell to split.
II. Right-click → **Split Cells** → Specify number of rows or columns → Click **OK**.
Use: To divide a single cell into multiple sections.

D. Formatting Tables

Applying Table Styles:

I. Click anywhere in the table.
II. Go to **Table Design Tab** (appears automatically).
III. Select a **Table Style** from the gallery.
IV. Adjust shading, borders, and colors.

Aligning Text Inside Cells:

I. Select the cells.
II. Go to **Layout Tab → Alignment group**.
III. Choose alignment: top-left, center, bottom-right, etc.

Adjusting Column Width and Row Height:

I. Hover the mouse over column borders → drag to resize.
II. Hover over row borders → drag to adjust height.

Practical Activity 1

I. Open a new Word document.
II. Insert a table with 4 columns × 5 rows.
III. Type the following headings in the first row:
| Day | Task | Start Time | End Time |
IV. Fill in three rows with your daily schedule.
V. Apply **bold** to the heading row.
VI. Center align the text in the heading row.
VII. Apply a **Table Style** of your choice.
VIII. Save the document as **Table Practice**.

Common Mistakes to Avoid

- Forgetting to select the correct number of rows or columns initially
- Not saving the table after formatting
- Overcomplicating table design in formal documents
- Ignoring text alignment inside cells

Mini Practice Challenge

Create a **Monthly Expense Table**:

- 5 columns: Date, Item, Category, Amount, Remarks
- 6 rows (including header)
- Bold the header row
- Apply a simple table style
- Center-align numbers in the Amount column

Save as: **Expenses Table**

3.6 Inserting Pictures, Shapes, and WordArt

Introduction

Adding visual elements to a document can make it more **attractive, clear, and professional**.

In this section, you will learn how to:

- Insert pictures from your computer
- Insert shapes
- Use WordArt for decorative text

All these tools are found in the **Insert Tab**.

A. Inserting Pictures

Pictures can illustrate your content and make your document engaging.

Steps:

I. Open a Word document.
II. Click the **Insert Tab**.
III. Click **Pictures** → Choose **This Device**.
IV. Browse and select the image you want.
V. Click **Insert**.

The picture will appear in your document.

Adjusting the Picture

I. Click on the picture.
II. Use **handles** on the corners to resize proportionally.
III. Go to **Picture Format Tab** to:

- Change position (Wrap Text → Square, Tight, Behind Text, etc.)
- Apply **Picture Styles** (border, shadow, effects)
- Crop the picture if needed

B. Inserting Shapes

Shapes are used for highlighting text, creating diagrams, or illustrations.

Steps:

I. Go to the **Insert Tab → Shapes**.
II. Select a shape (rectangle, circle, arrow, etc.).
III. Click and drag on the document to draw the shape.
IV. Use **Shape Format Tab** to change color, outline, or effects.

C. Using WordArt

WordArt is decorative text used for headings, titles, or emphasis.

Steps:

I. Go to the **Insert Tab → WordArt**.
II. Select a style.
III. Type your text in the box that appears.
IV. Adjust size, font, and color as desired.
V. Use **Drawing Tools** to rotate or position the WordArt.

Practical Activity 1

I. Open a new Word document.
II. Type the heading: **My Favorite Hobby**.
III. Insert a relevant picture from your computer.
IV. Insert a rectangle shape behind the heading and change its color.
V. Use WordArt for the heading text.
VI. Resize and align all elements neatly.
VII. Save the document as **Visual Practice**.

Tips for Using Visual Elements

- Keep images relevant to your content

- Avoid overloading the document with too many shapes or pictures
- Use WordArt sparingly in formal documents
- Always save your document after inserting visuals

Common Mistakes to Avoid

- Stretching images disproportionally
- Placing pictures in a way that blocks text
- Using too many decorative fonts for formal work
- Forgetting to save after inserting images

Mini Practice Challenge

Create a document titled **My Dream School**:

- Type a heading in WordArt
- Insert a picture of a school building
- Draw two shapes: one behind the heading, one highlighting a paragraph
- Apply colors and formatting
- Save as **DreamSchool.docx**

Perfect 👉
Now we move to **3.7 Page Layout and Printing**, a very practical skill for preparing professional documents.

3.7 Page Layout and Printing (Margins, Orientation, Header/Footer, Print Preview)

Introduction

Page layout is about **how the document appears on the page**. Proper layout ensures that documents are readable, well-organized, and ready for printing.

In this section, you will learn how to:

- Set margins
- Change page orientation
- Insert headers and footers
- Preview and print documents

All these tools are found in the **Layout Tab** and **Insert Tab**.

A. Setting Margins

Margins are the blank spaces around the edges of the page.

Steps:

I. Go to the **Layout Tab**.
II. Click **Margins**.
III. Choose a preset margin (Normal, Narrow, Moderate) or click **Custom Margins**.
IV. Adjust Top, Bottom, Left, and Right margins if needed.
V. Click **OK**.

Tip: Normal margins (2.54 cm) are standard for most documents.

B. Changing Page Orientation

Page orientation is how the page is positioned:

- **Portrait** → Vertical (default)
- **Landscape** → Horizontal

Steps:

I. Go to the **Layout Tab** → **Orientation**.
II. Select **Portrait** or **Landscape**.

Use Cases:

- Portrait → Letters, essays
- Landscape → Wide tables or charts

C. Inserting Header and Footer

Headers and footers appear at the top or bottom of each page. They often include:

- Page numbers
- Titles
- Dates

Steps:

I. Go to the **Insert Tab**.
II. Click **Header** → Choose a style.
III. Type the desired text.
IV. Click **Close Header and Footer**.

Repeat the same steps for **Footer**.

Adding Page Numbers:

I. Go to **Insert Tab** → **Page Number**.
II. Choose location (Top or Bottom of page).
III. Select numbering style.

D. Using Print Preview

Print Preview allows you to **see how the document will look when printed**.

Steps:

I. Click **File** → **Print**.
II. Check the **Preview Pane** on the right.
III. Make adjustments if needed (orientation, margins, page range).
IV. Select printer settings (Printer, Copies).
V. Click **Print** to print the document.

Practical Activity 1

I. Open a Word document.
II. Set **Margins** to Normal.
III. Change **Orientation** to Landscape.
IV. Insert a **Header** with the title: “My Project Report”.
V. Insert a **Footer** with page numbers.
VI. Preview the document using **Print Preview**.
VII. Save the document as **PageLayoutPractice**.

Tips for Page Layout

- Always check margins before printing
- Use headers/footers to identify documents
- Print a preview before sending to printer
- Use landscape orientation only for wide tables or charts

Common Mistakes to Avoid

- Forgetting to set margins, causing text to cut off
- Printing without previewing
- Placing page numbers incorrectly
- Using too many decorative headers in formal documents

Mini Practice Challenge

Create a document titled **Weekly Planner**:

- Set **Normal margins**
- Set **Landscape orientation**
- Insert a **Header**: “Weekly Planner”
- Insert **Footer** with page numbers
- Preview the document before printing
- Save as **WeeklyPlanner.docx**

PART III: SPREADSHEETS
(MS EXCEL – STEP BY STEP)

CHAPTER FOUR

INTRODUCTION TO MICROSOFT EXCEL

Introduction

Microsoft Excel is a **spreadsheet application** used to:

- Organize data
- Perform calculations
- Create charts
- Analyze information

It is widely used in schools, businesses, finance, and research.

In this chapter, you will learn how to:

- Open Excel and understand its interface
- Enter and edit data
- Perform basic calculations
- Format cells
- Create simple charts

This chapter is fully practical.

4.1 Opening and Understanding the Excel Interface

A. Opening Microsoft Excel

There are several ways to open Excel:

Method I: Using Start Menu

I. Click the **Start Button**.
II. Scroll through programs and locate **Microsoft Excel**.
III. Click **Microsoft Excel**.
IV. Wait for the application to open.

Method II: Using Search

I. Click the **Start Button**.
II. Type **Excel** in the search bar.
III. Click **Microsoft Excel** from results.

Method III: Using Desktop Shortcut

I. Locate the Excel icon on the desktop.
II. Double-click the icon.

When Excel opens, you may see:

- Blank Workbook
- Templates (e.g., budgets, calendars)

Click **Blank Workbook** to start.

B. Understanding the Excel Interface

The Excel workspace is divided into key parts:

I. Title Bar

Shows the workbook name and application name (e.g., Book1 – Excel).

II. Quick Access Toolbar

Contains commonly used commands like **Save, Undo, Redo**.

III. Ribbon

Located below the title bar. Contains **Tabs** such as:

- Home
- Insert
- Page Layout
- Formulas
- Data
- Review
- View

Each tab contains **Groups** of related tools.

IV. Worksheet Area

The grid of rows and columns where data is entered.

- **Rows** → Numbered (1, 2, 3…)
- **Columns** → Lettered (A, B, C…)
- Each cell has an **Address** (e.g., A1, B2).

V. Formula Bar

Displays content of the selected cell. You can also enter formulas here.

VI. Sheet Tabs

Located at the bottom. Default sheets are Sheet1, Sheet2, Sheet3. You can rename or add sheets.

VII. Status Bar

Shows information like **Sum, Average, Count** of selected cells.

Practical Activity 1

I. Open Microsoft Excel.
II. Identify the Title Bar, Quick Access Toolbar, Ribbon, Formula Bar, Worksheet Area, and Status Bar.
III. Open a new blank workbook.
IV. Click on cell **A1** and type: "Name".
V. Click on cell **B1** and type: "Age".
VI. Save the workbook as **ExcelPractice.xlsx** in Documents.

Tips for Beginners

- Always save your work regularly
- Learn cell addresses (e.g., C3, D5)
- Start with a blank workbook for practice
- Explore tabs and groups to familiarize yourself with tools

4.2 Entering and Editing Data in Excel

Introduction

Entering and editing data is the **core of using Excel**. A spreadsheet is useful only if data is entered correctly.

In this section, you will learn how to:

- Enter text, numbers, and dates
- Edit data in cells
- Delete or clear cell contents
- Use basic navigation between cells

A. Entering Data

Excel allows different types of data:

- **Text** → Names, titles, labels (e.g., "John", "Maths")
- **Numbers** → Quantities, scores, amounts (e.g., 50, 1000)
- **Dates/Time** → 12/02/2026, 08:30 AM

Steps to Enter Data:

I. Click the cell where you want to enter data (e.g., A1).
II. Type the data.
III. Press **Enter** to move to the cell below or **Tab** to move to the right.

B. Editing Data

Sometimes you need to correct or change data already entered.

Steps:

I. Click the cell you want to edit.
II. Do one of the following:

1. Type directly to replace the content.
2. Click in the **Formula Bar** to edit without replacing everything.
   III. Press **Enter** to confirm changes.

C. Deleting or Clearing Cell Content

Method I: Delete Key

I. Select the cell.
II. Press **Delete** on the keyboard.

- This clears the content but keeps the cell formatting.

Method II: Clear Command

I. Select the cell or range.
II. Go to **Home Tab → Editing group → Clear**.
III. Choose:

- **Clear All** → Deletes content and formatting
- **Clear Contents** → Deletes content only
- **Clear Formats** → Deletes formatting only

D. Copying, Cutting, and Pasting Data

Copying:

I. Select the cell(s).
II. Press **Ctrl + C** or right-click → Copy.
III. Select destination cell → Press **Ctrl + V** or right-click → Paste.

Cutting:

I. Select the cell(s).
II. Press **Ctrl + X** or right-click → Cut.
III. Select destination → Press **Ctrl + V**.

E. Navigating Between Cells

Efficient navigation speeds up work:

- **Arrow keys** → Move one cell in any direction
- **Tab** → Move one cell to the right
- **Enter** → Move one cell down
- **Ctrl + Arrow keys** → Jump to the last filled cell in a row or column

---

Practical Activity 1

I. Open a new workbook.
II. Enter the following table:

Name	Age	Class	Score
John	15	8A	80
Mary	14	8B	90
Peter	16	8A	85

III. Edit Peter's score to **88**.
IV. Delete Mary's class column.
V. Copy John's score to a new cell **D5**.
VI. Save the workbook as **DataPractice.xlsx**.

Tips for Beginners

- Always press **Enter** or **Tab** after entering data

- Use the **Formula Bar** to edit large data easily
- Learn shortcuts like **Ctrl + C, Ctrl + X, Ctrl + V**
- Always save after entering or editing data

Common Mistakes to Avoid

- Typing numbers as text (e.g., “50” with quotes)
- Forgetting to save changes
- Deleting formatting unintentionally
- Navigating inefficiently

4.3 Basic Formulas and Functions (SUM, AVERAGE, MIN, MAX)

Introduction

Excel is powerful because it can **perform calculations automatically**. Using formulas and functions saves time and reduces errors.

- **Formula** → A user-defined calculation (e.g., `=A1+B1`)
- **Function** → Predefined formula in Excel (e.g., `SUM`, `AVERAGE`)

In this section, you will learn how to:

- Use basic arithmetic formulas
- Apply common functions: SUM, AVERAGE, MIN, MAX
- Copy formulas efficiently

A. Using Arithmetic Formulas

Formulas always begin with an **equal sign (=)**.

Steps:

I. Click the cell where you want the result.
II. Type =
III. Click the cells you want to calculate, using operators:

- **+** → Addition
- **-** → Subtraction
- ***** → Multiplication
- **/** → Division
  IV. Press **Enter**

Example:

- Add numbers in cells A1 and B1:
  `=A1+B1`
- Multiply numbers in A2 and B2:
  `=A2*B2`

B. Using the SUM Function

SUM adds a range of numbers quickly.

Steps:

I. Click the cell where you want the total.
II. Type `=SUM(`
III. Select the range of cells to add (e.g., A1:A5)
IV. Type) and press **Enter**

Shortcut:

- Select the range → Click **AutoSum (Σ)** in the Home Tab → Press Enter

---

C. Using the AVERAGE Function

AVERAGE calculates the mean of numbers.

Steps:

I. Click the cell for the result.
II. Type `=AVERAGE(`
III. Select the range (e.g., B1:B5)
IV. Type) and press **Enter**

D. Using the MIN and MAX Functions

- **MIN** → Finds the smallest number in a range
- **MAX** → Finds the largest number in a range

Steps:

I. Click the cell for the result.
II. Type `=MIN(` or `=MAX(`
III. Select the range of cells (e.g., C1:C5)
IV. Type) and press **Enter**

E. Copying Formulas

Once you create a formula, you can copy it to other cells.

Steps:

I. Select the cell with the formula.
II. Hover over the bottom-right corner until a small **+ (fill handle)** appears.
III. Click and drag down or across to copy the formula.

Excel automatically adjusts the cell references.

Practical Activity 1

I. Open a new workbook.
II. Enter the following data:

Student	Maths	English	Science
John	80	90	85
Mary	75	88	92
Peter	90	85	80

III. In column E (Total), calculate the total for each student using `SUM`.
IV. In column F (Average), calculate the average using `AVERAGE`.
V. Find the **highest score** in Maths using `MAX`.
VI. Find the **lowest score** in Science using `MIN`.
VII. Save the workbook as **FormulasPractice.xlsx**.

Tips for Beginners

- Always start formulas with =
- Use cell references instead of typing numbers directly
- Use functions for quick calculations
- Copy formulas instead of typing repeatedly

Common Mistakes to Avoid

- Forgetting the equal sign =
- Selecting the wrong range of cells
- Overwriting formulas accidentally
- Using text instead of numbers in calculations

4.4 Formatting Cells (Number, Currency, Date, Font, Borders, Fill Color)

Introduction

Formatting cells in Excel improves the **appearance and readability** of your data. Proper formatting is essential for professional spreadsheets.

In this section, you will learn how to:

- Format numbers, currency, and dates
- Change fonts and font sizes
- Apply borders and fill colors
- Adjust alignment within cells

All these tools are found in the **Home Tab** under the **Number, Font, and Alignment groups**.

A. Formatting Numbers

Numbers can be displayed in different formats: General, Number, Currency, Percentage, etc.

Steps:

I. Select the cells containing numbers.
II. Go to **Home Tab → Number group**.
III. Click the drop-down menu to choose the format:

- **Number** → For normal numbers
- **Currency** → Adds currency symbol (e.g., $100.00)
- **Percentage** → Converts to percent (e.g., 0.85 → 85%)
- **Date** → Displays dates in various formats

B. Changing Font and Font Size

You can change how text or numbers look.

Steps:

I. Select the cells.
II. Go to **Home Tab → Font group**.
III. Choose **Font type** (e.g., Arial, Calibri).
IV. Choose **Font size**.
V. Use **Bold, Italic, or Underline** if needed.

C. Applying Borders

Borders help separate data for clarity.

Steps:

I. Select the cells or table.
II. Go to **Home Tab → Font group → Borders icon**.
III. Choose a border style:

- **All Borders** → Adds lines around every cell
- **Outside Borders** → Adds line around the entire selection
- **Thick Box Border** → Highlights a table

D. Applying Fill Color

Fill color highlights cells or makes headings stand out.

Steps:

I. Select the cells.
II. Go to **Home Tab → Font group → Fill Color (paint bucket icon)**.
III. Choose a color.

Tip: Use light colors for readability.

E. Aligning Content in Cells

You can align content horizontally or vertically:

- **Horizontal** → Left, Center, Right
- **Vertical** → Top, Middle, Bottom

Steps:

I. Select the cells.
II. Go to **Home Tab → Alignment group**.
III. Choose alignment options.

Practical Activity 1

I. Open a new workbook.
II. Enter the following data:

Item	Quantity	Price per Unit	Total
Pen	10	5	50
Notebook	5	20	100
Eraser	8	3	24

III. Format the **Price per Unit** and **Total** as **Currency**.
IV. Make the **header row bold** with a light fill color.
V. Apply **All Borders** to the table.
VI. Center-align the **Quantity** and **Total** columns.
VII. Save the workbook as **FormattingCellsPractice.xlsx**.

Tips for Beginners

- Always format headers to make tables clear
- Use consistent fonts and colors for professionalism
- Apply borders to separate data neatly
- Align numbers to the right for easy reading

Common Mistakes to Avoid

- Using too many colors or bright fills
- Forgetting to format numbers correctly (e.g., entering currency without symbol)
- Not applying borders, making data hard to read

- Misaligning text and numbers

Mini Practice Challenge

Create a **Monthly Expenses Table**:

- Columns: Item, Category, Amount, Date
- Apply **Currency format** to Amount
- Bold the header row with a light fill color
- Add borders around the table
- Center-align the Amount column
- Save as **ExpensesFormatted.xlsx**

4.5 Creating Simple Charts in Excel (Column, Bar, Line, Pie)

Introduction

Charts make data **easy to understand** and visually appealing. Excel allows you to create different types of charts such as:

- Column Chart → Compare values vertically
- Bar Chart → Compare values horizontally
- Line Chart → Show trends over time
- Pie Chart → Show parts of a whole

In this section, you will learn how to:

- Select data for charts
- Insert different chart types
- Format charts for clarity

A. Selecting Data for a Chart

Before creating a chart, select the data you want to display.

Steps:

I. Open an Excel workbook with data.
II. Click and drag to select the data range (including headings).
III. Ensure headings are included—they become chart labels.

Example Table:

Month	Sales
Jan	200
Feb	250
Mar	180

B. Inserting a Column Chart

Steps:

I. Select the data range.
II. Go to **Insert Tab → Charts group → Column Chart**.
III. Choose a **2-D Column** type.
IV. The chart appears in the worksheet.

Tip: Add **Chart Title** and **Data Labels** for clarity.

C. Inserting a Bar Chart

Steps:

I. Select the data.
II. Go to **Insert Tab → Charts → Bar Chart**.
III. Choose a **2-D Bar** type.
IV. Position the chart as needed.

Use: Compare data horizontally, useful when category names are long.

D. Inserting a Line Chart

Steps:

I. Select the data.
II. Go to **Insert Tab → Charts → Line Chart**.
III. Choose **2-D Line**.
IV. The chart shows trends over time.

Use: Track performance or changes over months, years, or days.

E. Inserting a Pie Chart

Steps:

I. Select the data (including labels).
II. Go to **Insert Tab → Charts → Pie Chart**.
III. Choose a style (2-D Pie).
IV. Add **Data Labels** and a **Title**.

Use: Show percentages of a whole, e.g., expenses by category.

F. Formatting Charts

Once the chart is created, you can format it:

I. Click the chart → **Chart Design** and **Format Tabs** appear.
II. Change chart style or color scheme.
III. Add or remove **Chart Elements** like:

- Titles
- Data Labels
- Legend

IV. Resize or move the chart as needed.

Practical Activity 1

I. Open a new workbook.
II. Enter the following table:

Product	Sales
Pen	50
Notebook	30
Eraser	20
Pencil	40

III. Create a **Column Chart** showing sales for each product.
IV. Add a **Chart Title**: "Product Sales".
V. Create a **Pie Chart** showing the same sales data.
VI. Add **Data Labels** to show numbers.
VII. Save the workbook as **ChartsPractice.xlsx**.

Tips for Beginners

- Always include headings for chart labels
- Use simple colors for clarity
- Avoid overloading the chart with too much data
- Always add a chart title

Common Mistakes to Avoid

- Forgetting to select headings, causing missing labels
- Using too many chart types in one sheet
- Not resizing or positioning charts
- Ignoring the importance of data labels

Mini Practice Challenge

Create a **Monthly Expenses Chart**:

- Table: Category (Rent, Food, Transport, Utilities) and Amount

- Create a **Pie Chart** showing expenses by category
- Add **Data Labels** showing percentages
- Add a **Chart Title**: "Monthly Expenses"
- Save as **ExpensesChart.xlsx**

4.6 Sorting and Filtering Data in Excel

Introduction

Sorting and filtering help you **organize and analyze data efficiently**.

- **Sorting** → Arranges data in a specific order (ascending or descending)
- **Filtering** → Displays only the data that meets certain criteria

In this section, you will learn how to:

- Sort data by numbers or text
- Apply custom sorting
- Filter data using AutoFilter

A. Sorting Data

You can sort data **alphabetically, numerically, or by date**.

Steps to Sort Data:

I. Select the column or range of data to sort.
II. Go to **Home Tab → Editing group → Sort & Filter**.
III. Click **Sort A to Z** (ascending) or **Sort Z to A** (descending).

Example:

- Names column → A to Z (alphabetical)
- Scores column → Largest to Smallest

Custom Sort

I. Select the data range including headings.
II. Go to **Data Tab → Sort**.
III. In the Sort dialog box:

1. Choose **Column** to sort
2. Choose **Sort On** → Values, Cell Color, or Font Color
3. Choose **Order** → A to Z, Z to A, Smallest to Largest
   IV. Click **OK**

B. Filtering Data

Filtering allows you to display **only the data you need** without deleting other data.

Steps:

I. Select the header row of your table.
II. Go to **Data Tab → Sort & Filter group → Filter**.
III. Small dropdown arrows appear on each header.
IV. Click the arrow for the column you want to filter.
V. Check or uncheck values to display.
VI. Click **OK**

Example:

- Filter students with scores greater than 80
- Filter products in a specific category

C. Clearing Sorts and Filters

I. Go to **Data Tab → Sort & Filter**
II. Click **Clear** to remove all filters
III. Click **Sort → Custom Sort** to reset sorting

Practical Activity 1

I. Open a new workbook.
II. Enter the following data:

Name	Class	Score
John	8A	80
Mary	8B	90
Peter	8A	85
Lucy	8C	75

III. Sort the **Score** column from **Largest to Smallest**.
IV. Sort the **Name** column alphabetically (A to Z).
V. Apply a filter to show only students with **Score ≥ 85**.
VI. Clear all filters.
VII. Save the workbook as **SortFilterPractice.xlsx**.

Tips for Beginners

- Always include headers for sorting and filtering
- Select the entire data range to avoid misaligned rows
- Use filters for large datasets
- Combine sorting and filtering for better analysis

Common Mistakes to Avoid

- Sorting without selecting the full table → causes data misalignment
- Forgetting to include headers
- Filtering without clearing previous filters
- Sorting incorrectly by only one column when multiple columns matter

---

Mini Practice Challenge

Create a **Student Marks Table**:

- Columns: Name, Subject, Score
- Sort by **Score descending**
- Filter to show only students who scored **≥ 80**
- Save as **StudentMarks.xlsx**

4.7 Printing and Page Setup in Excel

Introduction

Printing and page setup allow you to **control how your spreadsheet looks on paper**. Proper setup ensures that all data fits on the page and looks professional.

In this section, you will learn how to:

- Set print area
- Adjust page orientation and margins
- Use print titles and headers/footers
- Preview and print your workbook

A. Setting the Print Area

The print area defines which part of the worksheet will be printed.

Steps:

I. Select the range of cells you want to print.
II. Go to **Page Layout Tab → Page Setup group → Print Area → Set Print Area**.

Tip: Only the selected area will be printed; the rest will be ignored.

B. Adjusting Page Orientation and Margins

Page orientation and margins affect how the data fits on the page.

Steps:

I. Go to **Page Layout Tab**.
II. Click **Orientation** → Choose **Portrait** or **Landscape**.
III. Click **Margins** → Choose **Normal, Narrow, or Wide** or click **Custom Margins** to adjust manually.

Tip: Use Landscape orientation for wide tables.

C. Using Headers and Footers

Headers and footers appear on printed pages and can include titles, dates, or page numbers.

Steps:

I. Go to **Insert Tab → Text group → Header & Footer**.
II. Click inside the header or footer area.
III. Type the text or use the **Header & Footer Tools** to insert:

- Page Number
- Date
- File Name

IV. Click outside the header/footer area to return to the worksheet.

D. Print Titles

Print titles repeat rows or columns on every printed page (useful for large tables).

Steps:

I. Go to **Page Layout Tab → Page Setup group → Print Titles**.
II. Under **Rows to repeat at top**, select the header row(s).
III. Under **Columns to repeat at left**, select columns to repeat on each page (optional).
IV. Click **OK**.

E. Print Preview and Printing

Print Preview lets you check how your spreadsheet will look on paper.

Steps:

I. Go to **File → Print**.
II. Check the **Preview Pane** on the right.
III. Adjust settings if needed:

- Printer selection

- Number of copies
- Print active sheet, entire workbook, or selection
  IV. Click **Print** to print the worksheet.

Practical Activity 1

I. Open a workbook with a table of sales data.
II. Set the **Print Area** to include only the table.
III. Change the **Orientation** to Landscape.
IV. Adjust **Margins** to Narrow.
V. Insert a **Header** with the text: "Monthly Sales Report".
VI. Set the **Rows to repeat at top** for the header row.
VII. Preview the worksheet in **Print Preview**.
VIII. Print the worksheet (or save as PDF if printing is unavailable).
IX. Save the workbook as **PrintSetupPractice.xlsx**.

Tips for Beginners

- Always check **Print Preview** before printing
- Use **Landscape** for wide tables
- Repeat header rows for multi-page tables
- Adjust margins to prevent data from being cut off

Common Mistakes to Avoid

- Printing the entire worksheet instead of a selected area
- Ignoring headers and footers
- Forgetting to repeat header rows on multiple pages
- Printing without previewing

Mini Practice Challenge

Create a **Class Marks Table**:

- Set **Print Area** to include only the table

- Change **Orientation** to Landscape
- Add a **Header**: “Class Marks Report”
- Repeat the top row on all pages
- Preview and print the worksheet
- Save as **ClassMarksPrint.xlsx**

4.8 Protecting and Saving Excel Workbooks

Introduction

Excel allows you to **save workbooks in different formats** and **protect your data** from accidental changes. This ensures your data remains secure and accessible.

In this section, you will learn how to:

- Save workbooks in different formats
- Save automatically and manually
- Protect a workbook or worksheet with a password
- Lock cells to prevent editing

A. Saving Workbooks

Manual Save:

I. Click **File → Save As**.
II. Choose the location (Documents, Desktop, or other folders).
III. Type a **file name**.
IV. Choose the file format:

- `.xlsx` → Standard Excel workbook
- `.xls` → Older Excel version
- `.csv` → Comma-separated values (useful for data transfer)

V. Click **Save**.

AutoSave (Office 365 Users):

I. Enable **AutoSave** at the top left corner.
II. Excel will save changes automatically every few seconds.

B. Protecting a Workbook

Protecting a workbook prevents others from editing or viewing certain content.

Steps:

I. Click **File → Info → Protect Workbook**.
II. Choose one of the options:

- **Mark as Final** → Prevents further editing
- **Encrypt with Password** → Requires a password to open the workbook
- **Protect Current Sheet** → Lock specific worksheet
- **Restrict Access** → Limit permissions (requires Microsoft account)

C. Protecting a Worksheet

You can protect specific cells or sheets:

Steps:

I. Select the cells you want users to edit (optional).
II. Right-click → **Format Cells → Protection → Uncheck "Locked"**.
III. Go to **Review Tab → Protect Sheet**.
IV. Enter a **password** (optional).
V. Choose what users are allowed to do (select options).
VI. Click **OK**.

Tip: Always remember the password; Excel cannot recover it.

D. Closing and Reopening a Protected Workbook

I. Save and close the workbook.
II. Reopen the workbook.
III. If a password was set, Excel will prompt for it.
IV. Enter the password to access or edit the workbook.

Practical Activity 1

I. Open a new workbook.
II. Enter a simple table of student names and scores.
III. Save the workbook as **StudentScores.xlsx** in your Documents folder.
IV. Protect the **worksheet** so users can only view but not edit the data.
V. Close the workbook.
VI. Reopen and check that the protection works.
VII. Save a **copy in CSV format** for backup purposes.

Tips for Beginners

- Save workbooks regularly to prevent data loss
- Use meaningful file names to locate workbooks easily
- Protect sheets to avoid accidental changes
- Keep a backup in a different format or folder

Common Mistakes to Avoid

- Forgetting passwords → cannot unlock protected sheets
- Overwriting original workbooks without backup
- Saving in the wrong format when sharing
- Not checking if protection works after setting it

Mini Practice Challenge

I. Create a **Monthly Expenses Table**.
II. Save as **MonthlyExpenses.xlsx**.
III. Protect the worksheet to prevent edits.

IV. Save another copy as **MonthlyExpenses.csv**.
V. Close and reopen to test protection.

PART IV: PRESENTATIONS
(MS POWERPOINT – HANDS ON)

CHAPTER FIVE

INTRODUCTION TO MICROSOFT POWERPOINT

Introduction

Microsoft PowerPoint is used to **create visual presentations** for:

- Lessons and lectures
- Business meetings
- Projects and reports

PowerPoint allows you to combine **text, images, charts, animations, and transitions** to deliver effective presentations.

In this chapter, you will learn how to:

- Open PowerPoint and understand its interface
- Create and format slides
- Insert images, shapes, charts, and text boxes
- Apply transitions and animations
- Prepare a presentation for slideshow mode and printing

This chapter is **mostly practical**.

5.1 Opening PowerPoint and Understanding the Interface

A. Opening Microsoft PowerPoint

There are multiple ways to open PowerPoint:

Method I: Using Start Menu

I. Click the **Start Button**.
II. Scroll and locate **Microsoft PowerPoint**.
III. Click to open.

Method II: Using Search

I. Click **Start**.
II. Type **PowerPoint** in the search bar.
III. Click **Microsoft PowerPoint** from the results.

Method III: Desktop Shortcut

I. Locate the PowerPoint icon on the desktop.
II. Double-click it.

When PowerPoint opens, you may see:

- **Blank Presentation** → Start from scratch
- **Templates** → Pre-designed slides

Click **Blank Presentation** to start.

B. Understanding the PowerPoint Interface

The PowerPoint workspace consists of:

I. Title Bar

Shows the presentation name and application.

II. Quick Access Toolbar

Contains frequently used commands like **Save, Undo, Redo**.

III. Ribbon

Contains **Tabs** with groups of tools:

- **Home** → Text formatting, slides
- **Insert** → Images, shapes, charts, text boxes
- **Design** → Slide themes and backgrounds
- **Transitions** → Slide transition effects
- **Animations** → Animate objects
- **Slide Show** → Present slides
- **Review** → Spell check, comments
- **View** → Different views of slides

IV. Slides Pane

Displays small previews of all slides on the left. You can select and reorder slides here.

V. Slide Workspace

The main area where you **edit and design each slide**.

VI. Notes Pane

Located below the slide workspace. Add speaker notes for your presentation.

VII. Status Bar

Shows slide number, theme, and view options.

Practical Activity 1

I. Open Microsoft PowerPoint.
II. Identify the **Title Bar, Ribbon, Slides Pane, Slide Workspace, Notes Pane, and Status Bar**.
III. Open a **Blank Presentation**.
IV. In the first slide (Title Slide), type:

- **Title:** My First Presentation
- **Subtitle:** Your Name

V. Save the presentation as **FirstPresentation.pptx**.

Tips for Beginners

- Always save your presentation after making changes
- Explore the Ribbon to familiarize yourself with tools
- Start with a blank presentation for practice
- Add speaker notes to remember key points during presentation

---

5.2 Creating and Formatting Slides

Introduction

Creating and formatting slides allows you to **structure your presentation clearly** and make it visually appealing.

In this section, you will learn how to:

- Add new slides
- Choose slide layouts
- Format text and content
- Rearrange slides
- Apply basic design themes

A. Adding New Slides

Steps:

I. Open your presentation.
II. Go to **Home Tab → Slides group → New Slide**.
III. Choose a **slide layout** (Title Slide, Title and Content, Two Content, etc.).
IV. The new slide appears in the **Slides Pane**.

Tip: Use layouts that match your content for clarity.

B. Choosing and Changing Slide Layouts

Slide layouts determine **how content is arranged**.

Steps:

I. Select the slide in the Slides Pane.
II. Go to **Home Tab → Slides group → Layout**.
III. Click a layout (e.g., Title and Content, Comparison, Blank).

C. Formatting Text

Formatting improves readability and aesthetics.

Steps:

I. Select the text on the slide.
II. Go to **Home Tab → Font group**:

- Change **Font Type** (e.g., Arial, Calibri)
- Change **Font Size**
- Apply **Bold, Italic, Underline**
- Change **Font Color**
  III. Use **Paragraph group** for alignment:
- Left, Center, Right
- Bulleted or numbered lists

D. Rearranging Slides

You can change the order of slides for better flow.

Steps:

I. In the **Slides Pane**, click the slide you want to move.
II. Drag it to the new position.
III. Release the mouse to place it.

E. Applying Design Themes

Themes give your presentation a **consistent look and feel**.

Steps:

I. Go to **Design Tab**.
II. Select a **theme** from the gallery.
III. Click to apply to all slides.

Tip: Themes automatically adjust fonts, colors, and backgrounds.

Practical Activity 1

I. Open your **FirstPresentation.pptx**.
II. Add three new slides using **Title and Content layout**.
III. Format each slide:

- Change the font type to **Calibri**
- Make titles **Bold**
- Center-align main text
  IV. Rearrange slides so the new slides follow the title slide.
  V. Apply a **Design Theme** of your choice.
  VI. Save the presentation.

Tips for Beginners

- Use layouts for consistency and clarity
- Keep text concise—avoid overcrowding slides
- Apply a theme for professional look
- Rearrange slides to ensure logical flow

Common Mistakes to Avoid

- Overloading slides with too much text
- Using inconsistent fonts and sizes
- Forgetting to rearrange slides for proper flow
- Ignoring slide layout options

Mini Practice Challenge

Create a small **3-slide presentation**:

- **Slide 1:** Title Slide → "My Favorite Hobby"
- **Slide 2:** Title and Content → Describe the hobby in 3–4 points
- **Slide 3:** Title and Content → Add a short conclusion
- Format text, apply a theme, and rearrange if needed

- Save as **HobbyPresentation.pptx**

5.3 Inserting Images, Shapes, and Charts

Introduction

Adding images, shapes, and charts makes your presentation **more visual and easier to understand**. Visuals help convey information effectively.

In this section, you will learn how to:

- Insert and format images
- Insert and customize shapes
- Add charts to display data

A. Inserting Images

You can insert pictures from your computer or online.

Steps:

I. Select the slide where you want the image.
II. Go to **Insert Tab → Images group → Pictures**.
III. Choose **This Device** to insert from your computer, or **Online Pictures**.
IV. Browse and select the image → Click **Insert**.
V. Resize and move the image as needed by dragging corners.

Tip: Hold **Shift** while resizing to keep proportions.

B. Inserting Shapes

Shapes can be used for emphasis, flowcharts, or design.

Steps:

I. Select the slide.
II. Go to **Insert Tab → Illustrations group → Shapes**.
III. Click the shape you want (Rectangle, Circle, Arrow, etc.).
IV. Click and drag on the slide to draw the shape.
V. Format shape:

- **Fill Color** → Change inside color
- **Outline Color** → Change border color
- **Effects** → Add shadow or 3D effect

C. Inserting Charts

Charts visually represent data. PowerPoint allows column, bar, line, and pie charts.

Steps:

I. Select the slide.
II. Go to **Insert Tab → Illustrations group → Chart**.
III. Choose a chart type (Column, Line, Pie, etc.) → Click **OK**.
IV. A datasheet opens → Enter data
V. Close the datasheet → The chart updates automatically
VI. Resize or move the chart on the slide

D. Formatting Visual Elements

- **Images:** Add borders, effects, or crop unwanted parts
- **Shapes:** Adjust size, fill, outline, and effects
- **Charts:** Add titles, data labels, and change colors using the **Chart Tools** tab

---

Practical Activity 1

I. Open **HobbyPresentation.pptx**.
II. On **Slide 2**, insert a picture related to your hobby.
III. Add a **Rectangle shape** around the picture with a fill color.
IV. Insert a **Pie Chart** showing time spent on different activities (Hobby, School, Sleep, Other).

V. Format the chart with data labels and colors.
VI. Save the presentation.

Tips for Beginners

- Always resize images from corners to maintain proportions
- Use shapes to highlight important points
- Keep charts simple and readable
- Combine visuals with text for clarity

Common Mistakes to Avoid

- Overcrowding slides with too many images or shapes
- Stretching images, causing distortion
- Using too many colors in charts
- Forgetting to label charts or shapes

Mini Practice Challenge

Create a **Slide about Your Favorite Fruit**:

- Insert an image of the fruit
- Add two shapes to highlight benefits or facts
- Insert a Pie Chart showing favorite fruits in your class
- Format visuals neatly
- Save as **FruitPresentation.pptx**

5.4 Adding Transitions and Animations

Introduction

Transitions and animations make your slides **visually appealing** and help guide your audience's attention.

- **Transition** → The effect that occurs when moving from one slide to another
- **Animation** → The effect applied to objects (text, images, shapes) on a slide

In this section, you will learn how to:

- Apply slide transitions
- Apply animations to objects
- Adjust the timing and effect options

A. Adding Slide Transitions

Steps:

I. Select the slide in the **Slides Pane**.
II. Go to **Transitions Tab**.
III. Click a transition effect (e.g., Fade, Push, Wipe).
IV. Use **Effect Options** to change direction or style (if available).
V. Adjust **Duration** to control speed of transition.
VI. Click **Apply To All** if you want the same transition for all slides.

Tip: Keep transitions simple for professional presentations.

B. Adding Animations to Objects

You can animate text, images, shapes, or charts.

Steps:

I. Select the object on the slide.
II. Go to **Animations Tab**.
III. Click a desired animation (Entrance, Emphasis, Exit, or Motion Path).
IV. Adjust **Effect Options** to change direction, sequence, or style.
V. Use **Animation Pane** to view, reorder, or fine-tune animations.

C. Adjusting Timing and Triggers

Steps:

I. Select the animated object.
II. Go to **Animations Tab → Timing group**.
III. Choose **Start**:

- **On Click** → Animates when you click
- **With Previous** → Animates with previous animation
- **After Previous** → Animates after previous animation finishes
  IV. Set **Duration** → How long the animation lasts
  V. Set **Delay** → How long before the animation starts

D. Previewing Transitions and Animations

I. Go to **Slide Show Tab → From Beginning** or **From Current Slide**
II. Observe transitions between slides
III. Observe animations on objects
IV. Adjust as needed using the **Transitions** and **Animations Tabs**

Practical Activity 1

I. Open **HobbyPresentation.pptx**.
II. Apply the **Fade transition** to all slides with duration 2 seconds.
III. On **Slide 2**, animate the image of your hobby to **Appear** with **Start: On Click**.
IV. Animate the text boxes to **Fly In from Left** with **Start: After Previous**.
V. Use the **Animation Pane** to reorder and adjust timing.
VI. Preview the slideshow from the current slide.
VII. Save the presentation.

Tips for Beginners

- Use subtle transitions for professional presentations
- Avoid overusing animations—too many can distract
- Preview slides often to check the flow
- Adjust timing so animations are smooth and readable

Common Mistakes to Avoid

- Applying too many flashy transitions
- Animating every object on every slide
- Using inconsistent animation styles
- Forgetting to preview and adjust timing

Mini Practice Challenge

Create a **Slide about Your Favorite Sport**:

- Insert a picture of the sport
- Add two text boxes describing it
- Apply **Fade transition** to the slide
- Animate the picture to **Zoom**
- Animate the text boxes to **Fly In**
- Adjust timing for smooth presentation
- Save as **SportPresentation.pptx**

5.5 Preparing and Delivering a Slide Show

Introduction

After creating slides, transitions, and animations, you need to **prepare and deliver your presentation professionally**. This includes running the slideshow, printing slides if needed, and sharing your work with others.

In this section, you will learn how to:

- Use Slide Show mode
- Navigate during a presentation
- Print slides or handouts
- Share presentations digitally

A. Slide Show Mode

Slide Show mode displays slides full-screen for presentation.

Steps:

I. Open your presentation.
II. Go to **Slide Show Tab → Start Slide Show**.
III. Choose:

- **From Beginning** → Starts from the first slide
- **From Current Slide** → Starts from the slide you are on
  IV. Navigate slides during presentation:
- **Next Slide:** Click mouse, press **Right Arrow**, **Down Arrow**, or **Page Down**
- **Previous Slide:** Press **Left Arrow**, **Up Arrow**, or **Page Up**
- **Go to Slide:** Press **Number + Enter** to jump to a specific slide

---

B. Using Presenter View

Presenter View allows you to see **notes and upcoming slides** while the audience sees only the current slide.

Steps:

I. Go to **Slide Show Tab → Monitors group → Use Presenter View**.
II. Connect to a second monitor or projector.
III. The main screen shows current slide and notes; the audience sees only slides.

C. Printing Slides and Handouts

You can print slides for review, distribution, or handouts.

Steps:

I. Go to **File → Print**.
II. Choose **Printer**.
III. Select **Print Layout**:

- **Full Page Slides** → One slide per page

- **Handouts** → Multiple slides per page
- **Notes Pages** → Slide plus speaker notes
  IV. Adjust **Orientation, Color, and Copies** as needed.
  V. Click **Print**.

D. Sharing Presentations

You can share your presentation digitally.

Steps:

I. Go to **File → Share**.
II. Options include:

- **Email** → Send as attachment
- **Save to Cloud (OneDrive)** → Share link
- **Export → PDF or Video** → Convert presentation for easier sharing

Tip: Exporting to PDF ensures formatting remains intact.

Practical Activity 1

I. Open **HobbyPresentation.pptx**.
II. Run the **Slide Show** from the beginning.
III. Navigate through all slides using keyboard arrows.
IV. Enable **Presenter View** and view your notes.
V. Print the slides as **Handouts with 2 slides per page**.
VI. Share the presentation by exporting it as **PDF**.
VII. Save your work.

Tips for Beginners

- Practice navigating slides before the actual presentation
- Use Presenter View to remember key points
- Print handouts for audience reference
- Save in multiple formats for backup and sharing

Common Mistakes to Avoid

- Not rehearsing the slide show
- Overloading slides with text and animations
- Forgetting to check slide numbers and order
- Ignoring file format when sharing

Mini Practice Challenge

Create a **Slide Show on Your Favorite Animal**:

- Include 3 slides: Title, Facts, Conclusion
- Add images and animations
- Run the slide show from beginning
- Use Presenter View to check notes
- Print handouts with 2 slides per page
- Export as **PDF**
- Save as **AnimalPresentation.pptx**

PART V: INTERNET & EMAIL (PRACTICAL)

CHAPTER 6 – INTRODUCTION TO THE INTERNET

Introduction

The Internet is one of the most powerful tools in the digital world. It connects millions of computers worldwide and allows people to communicate, learn, work, and do business online.

In this chapter, you will learn:

- What the Internet is
- Important Internet terminologies
- How to connect to the Internet
- How to use a web browser

This chapter is **highly practical**, and you are encouraged to practice every step.

6.1 Understanding the Internet and Basic Terminologies

A. What is the Internet?

The Internet is a global network of interconnected computers that communicate and share information.

In simple terms, it allows people around the world to:

- Search for information
- Send and receive emails
- Watch videos
- Study online
- Use social media
- Conduct business

B. Important Internet Terminologies

Understanding these terms will make Internet use easier.

1. Website

A collection of related web pages under one name.
Example: www.google.com

2. Web Page

A single page within a website.

3. Web Browser

Software used to access websites.
Examples:

- Google Chrome
- Microsoft Edge
- Mozilla Firefox
- Safari

4. URL (Uniform Resource Locator)

The address of a website.
Example: https://www.university.edu

5. Search Engine

A website that helps you find information online.
Examples:

- Google
- Bing
- Yahoo

6. Download

Transferring a file from the Internet to your computer.

7. Upload

Sending a file from your computer to the Internet.

6.2 Connecting to the Internet (Practical)

A. Connecting Using Wi-Fi

Steps:

I. Click the **Network/Wi-Fi icon** on the taskbar.
II. Select a Wi-Fi network from the list.
III. Click **Connect**.
IV. Enter the Wi-Fi password.
V. Click **Next/Connect**.
VI. Wait until it shows **Connected**.

B. Connecting Using Mobile Hotspot

Steps:

I. Turn on **Mobile Data** on your phone.
II. Go to **Settings → Hotspot & Tethering**.
III. Turn on **Mobile Hotspot**.
IV. On your computer, click the **Wi-Fi icon**.
V. Select your phone's hotspot name.
VI. Enter the hotspot password.
VII. Click **Connect**.

Practical Activity 1

I. Connect your computer to a Wi-Fi network.
II. Open a web browser.
III. Type www.google.com in the address bar.
IV. Press **Enter**.
V. Confirm that the page loads successfully.

Tips for Beginners

- Always connect to secure (password-protected) networks.
- Avoid entering personal information on unknown public Wi-Fi.
- Check your connection status before browsing.

Common Problems and Solutions

Problem	Possible Solution
No Internet access	Restart router
Cannot connect	Re-enter correct password
Slow Internet	Move closer to router
Website not loading	Refresh page

6.3 Using a Web Browser Effectively (Very Practical)

Introduction

A web browser is your main tool for accessing the Internet. Knowing how to use it properly will make your online experience faster, safer, and more productive.

In this section, you will learn how to:

- Open and navigate a browser
- Search for information
- Use tabs
- Bookmark websites
- Download files

A. Opening a Web Browser

Common browsers include:

- Google Chrome
- Microsoft Edge

- Mozilla Firefox
- Safari

Steps to Open a Browser:

I. Click the **Start Menu**.
II. Type the name of the browser (e.g., Chrome).
III. Click the browser icon to open it.

OR

I. Double-click the browser icon on the desktop.

B. Understanding the Browser Interface

When the browser opens, you will see:

- **Address Bar** → Where you type website addresses (URLs)
- **Search Bar** → Used to search for information
- **Tabs** → Allow multiple websites to be open at once
- **Back and Forward Buttons** → Navigate between pages
- **Refresh Button** → Reloads the page

C. Searching for Information

You can search in two main ways:

Method 1: Using the Address Bar

I. Click inside the address bar.
II. Type your search term (e.g., Importance of digital literacy).
III. Press **Enter**.
IV. Review the search results.

Method 2: Using a Search Engine Website

I. Type www.google.com in the address bar.
II. Press **Enter**.

III. Type your search term in the search box.
IV. Click **Search** or press **Enter**.

D. Opening and Managing Tabs

Tabs allow you to open multiple websites in one browser window.

To Open a New Tab:

I. Click the **+ (New Tab)** button.
OR
II. Press **Ctrl + T** on the keyboard.

To Switch Between Tabs:

I. Click the desired tab.
OR
II. Press **Ctrl + Tab**.

To Close a Tab:

I. Click the **X** on the tab.
OR
II. Press **Ctrl + W**.

E. Bookmarking a Website

Bookmarks allow you to save websites for future use.

Steps:

I. Open the website you want to save.
II. Click the **Star icon** in the address bar.
III. Choose a folder (e.g., Bookmarks Bar).
IV. Click **Done**.

To open a bookmarked site:

I. Click the **Bookmarks Menu**.
II. Select the saved website.

F. Downloading Files

Downloading means saving a file from the Internet to your computer.

Steps:

I. Click the file link (e.g., PDF or image).
II. Click **Download**.
III. Choose location (e.g., Downloads folder).
IV. Click **Save**.
V. Open the file from the Downloads folder.

Practical Activity 1

I. Open your browser.
II. Search for "Benefits of Computer Literacy."
III. Open two different websites in separate tabs.
IV. Bookmark one website.
V. Download a PDF file from one of the sites.
VI. Locate the downloaded file in your Downloads folder.

Internet Safety Tip

- Do not download files from unknown or suspicious websites.
- Always check the website address carefully.
- Avoid clicking on pop-up advertisements.

Common Mistakes to Avoid

- Typing search terms in the wrong place
- Opening too many tabs and getting confused

- Downloading unsafe files
- Forgetting to bookmark important websites

6.4 Creating and Using Email (Very Practical)

Introduction

Email (Electronic Mail) is a method of sending and receiving messages over the Internet.

It is used for:

- Formal communication
- Job applications
- School assignments
- Business communication
- Sending documents and files

In this section, you will learn how to:

- Create an email account
- Sign in and sign out
- Send and receive emails
- Attach files
- Reply and forward messages

A. Creating an Email Account (Using Gmail Example)

There are many email providers such as:

- Gmail (www.gmail.com)
- Outlook (www.outlook.com)
- Yahoo Mail

We will use Gmail as an example.

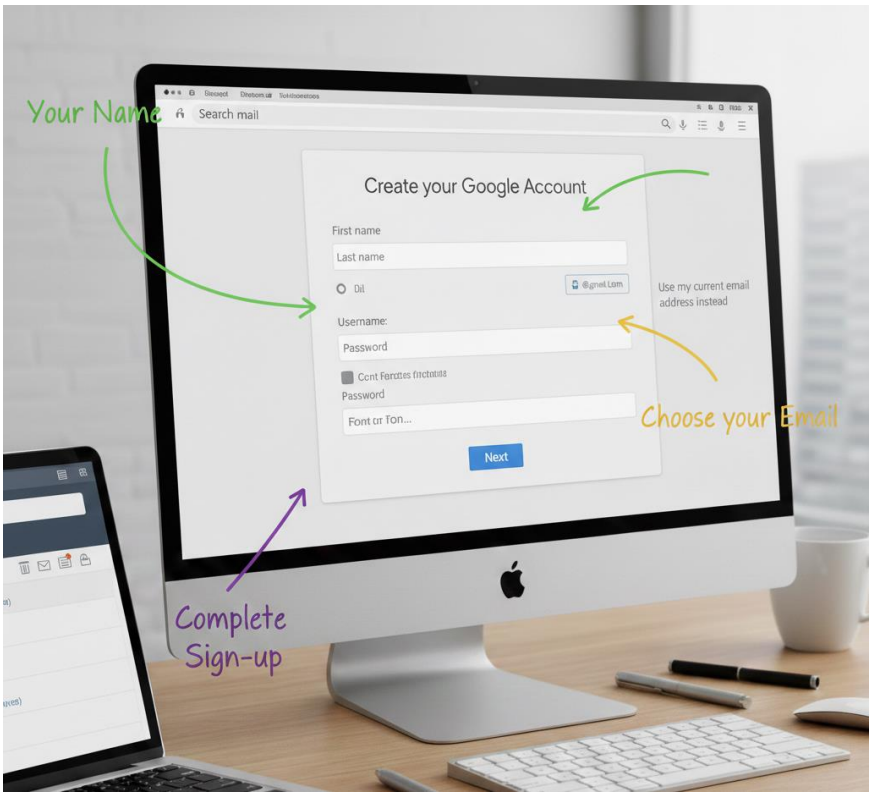
Steps to Create a Gmail Account:

I. Open your web browser.
II. Type **www.gmail.com** in the address bar.
III. Click **Create account**.
IV. Choose **For myself** (or appropriate option).
V. Enter your details:

- First name
- Last name
- Username (this becomes your email address)
- Password

VI. Click **Next**.
VII. Enter your phone number (optional but recommended).
VIII. Verify with the code sent to your phone.
IX. Agree to the Terms and Conditions.
X. Your Gmail account will open successfully.

Example Email Address:
john123@gmail.com



B. Signing In to Your Email

It Is the process of gaining access to your email account.

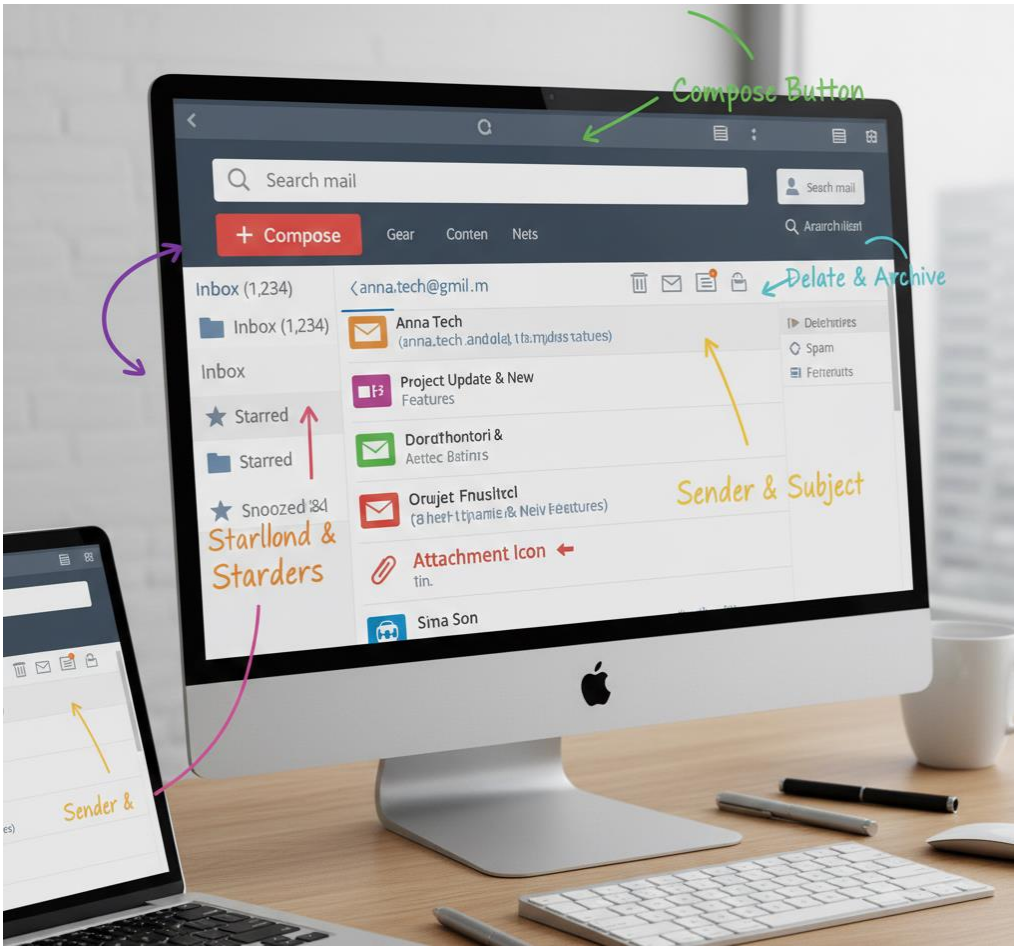
Steps:

I. Go to www.gmail.com.
II. Enter your email address.
III. Click **Next**.
IV. Enter your password.
V. Click **Sign in**.

C. Understanding the Email Interface

When you open Gmail, you will see:

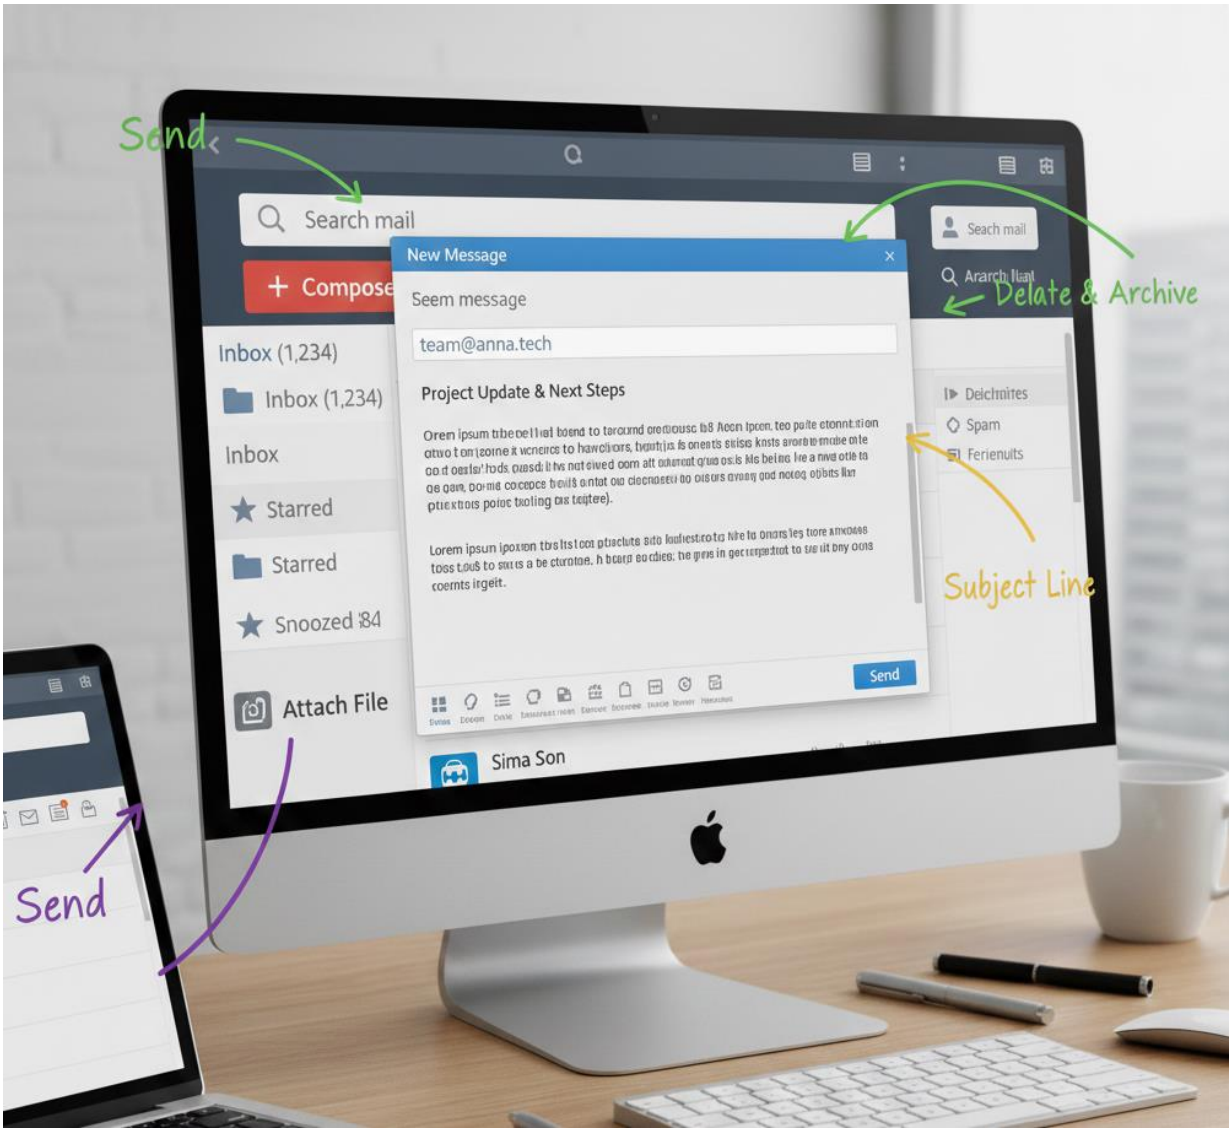
- **Inbox** → Received messages
- **Compose** → Create a new email
- **Sent** → Messages you have sent
- **Drafts** → Unfinished messages
- **Trash** → Deleted emails



D. Sending an Email

Steps:

I. Click **Compose**.
II. In the **To** field, type the recipient's email address.
III. In the **Subject** field, type the topic of the email.
IV. Type your message in the message box.
V. Click **Send**.



Example of a Simple Email

Subject: Assignment Submission

Dear Sir/Madam,

Please find attached my assignment for review.

Thank you.
Best regards,
Your Name

E. Attaching a File to an Email

Steps:

I. Click **Compose**.
II. Click the **Attach (Paperclip) icon**.
III. Select the file from your computer.
IV. Click **Open**.
V. Wait for the file to upload.
VI. Click **Send**.

F. Replying and Forwarding Emails

To Reply:

I. Open the email.
II. Click **Reply**.
III. Type your message.
IV. Click **Send**.

To Forward:

I. Open the email.
II. Click **Forward**.
III. Enter the new recipient's email address.
IV. Click **Send**.

Practical Activity 1

I. Create a Gmail account (if you do not have one).
II. Log in to your email.
III. Compose a new email and send it to a friend.
IV. Attach a Word document or PDF file.
V. Ask your friend to reply.
VI. Check your Inbox and reply back.

Email Etiquette (Very Important)

- Always include a clear subject line
- Use polite and professional language
- Avoid typing in ALL CAPITAL LETTERS
- Do not share your password
- Always log out on public computers

Common Mistakes to Avoid

- Sending emails without a subject
- Attaching the wrong file
- Forgetting to attach a file mentioned in the message
- Sharing login details with others

6.5 Internet Safety, Security, and Digital Responsibility (Very Important)

Introduction

The Internet is powerful and useful, but it also has risks.
Every digital user must understand how to stay safe, protect personal information, and behave responsibly online.

This section is **highly practical and essential** for all Internet users.

You will learn:

- How to protect personal information
- How to create strong passwords
- How to identify online threats
- How to behave responsibly online

A. Protecting Personal Information

Personal information includes:

- Full name
- Phone number
- Home address
- School or workplace
- Bank details
- Passwords

Never share sensitive information with strangers online.

Practical Safety Rules:

I. Do not share passwords with anyone.
II. Avoid posting personal details publicly on social media.
III. Do not enter personal information on suspicious websites.
IV. Always check website addresses carefully.
V. Log out from accounts when using public computers.

B. Creating Strong Passwords

A strong password protects your account from hackers.

Characteristics of a Strong Password:

- At least 8–12 characters
- Combination of uppercase letters
- Lowercase letters
- Numbers
- Special symbols (@, #, $, %)

Example of strong password format:
Digi@2026Learn

Steps to Change Password:

I. Log in to your account.
II. Go to **Account Settings**.
III. Click **Security**.

IV. Select **Change Password**.
V. Enter current password.
VI. Enter new strong password.
VII. Click **Save**.

C. Identifying Online Threats

1. Phishing

Fake messages pretending to be from banks, companies, or friends asking for personal information.

Warning Signs:

- Urgent message like “Your account will be closed!”
- Suspicious links
- Poor spelling or grammar

---

2. Malware

Malicious software that can damage your computer.

Prevention:

- Do not download from unknown websites
- Install antivirus software
- Avoid clicking suspicious ads

---

3. Scams and Fraud

Fraudsters may promise money, prizes, or job offers.

Rule:
If it sounds too good to be true, it probably is.

D. Safe Browsing Practices

Steps to Stay Safe Online:

I. Use trusted websites only.
II. Look for “https” in the website address.
III. Keep your browser updated.
IV. Install antivirus software.
V. Avoid clicking unknown links in emails.

E. Digital Responsibility and Online Behavior

Being responsible online means:

- Respecting others
- Avoiding cyberbullying
- Not spreading false information
- Following laws and regulations

Good Digital Citizenship Includes:

I. Thinking before posting online.
II. Respecting other people’s opinions.
III. Not sharing harmful or inappropriate content.
IV. Reporting suspicious or harmful activities.

Practical Activity 1

I. Review your social media privacy settings.
II. Change your password to a stronger one.
III. Check if your browser shows “https” on websites you visit.
IV. Delete any suspicious emails in your inbox.
V. Install or update antivirus software.

Common Mistakes to Avoid

- Using easy passwords like 123456
- Clicking unknown email links
- Sharing personal information publicly
- Ignoring software updates
